DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

- 1) Claims 1-4, are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are generally narrative and indefinite, failing to conform with current U.S. practice. They appear to be a literal translation into English from a foreign document and are replete with grammatical and idiomatic errors.

Claim 1 recites the limitation "the surface" in line 1; the limitation "the drum" in line 5; the limitation "the paper strip" in line 5.

Claim 4 recites the limitation "the surface" in line 1; the limitation "the paper machine" in line 5; the limitation "the oil" in line 8; the limitation "the surface" in line 9; the limitation "the depletion" in line 16.

There are insufficient antecedent bases for these limitations in the claims.

The applicant is requested to verify that claims 5-7 are deleted.

Specification

- 2) This application does not contain an abstract of the disclosure as required by 37 CFR 1.72(b). An abstract on a separate sheet is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3) Claims 1-4, are rejected under 35 U.S.C. 102(b) as being anticipated by Donnelly (3,014,832). Donnelly discloses a paper making process of fabricating a tissue. The process contains a Yankee drier 17' as shown in Figure 2. The drier surface is kept clean (col. 3, lines 15-20) by the release of an emulsified oil agent (col. 5, lines 1-22) applied to the rotating Yankee drier cylinder and advancing web at nip 16' (see Figure 2). The release agent is continuous and uniform and it contacts the surface of the drier before the surface contacts the paper web (col. 7, line 50 to col. 8, line 30 and Figure 2). It is inherent that the applied oil creates a thin oil film on the drier cylinder and the continuously applied oil fills any microscopic recesses on the surface of the drum. The release agent is applied between 0.02 and 2 pounds per ton of tissue web having a basis weight before creeping of 7.6 pounds per ream of 3000 square feet (col. 5, lines 34-46). The drying cylinder drum rotates at speeds of up to 3000 feet per minute (col. 6, lines 55-60).
